Unit-connecting controllers support a wide array of combinations!

Combine a driver unit with the exact number of required axes for a more compact controller and reduced installation space.

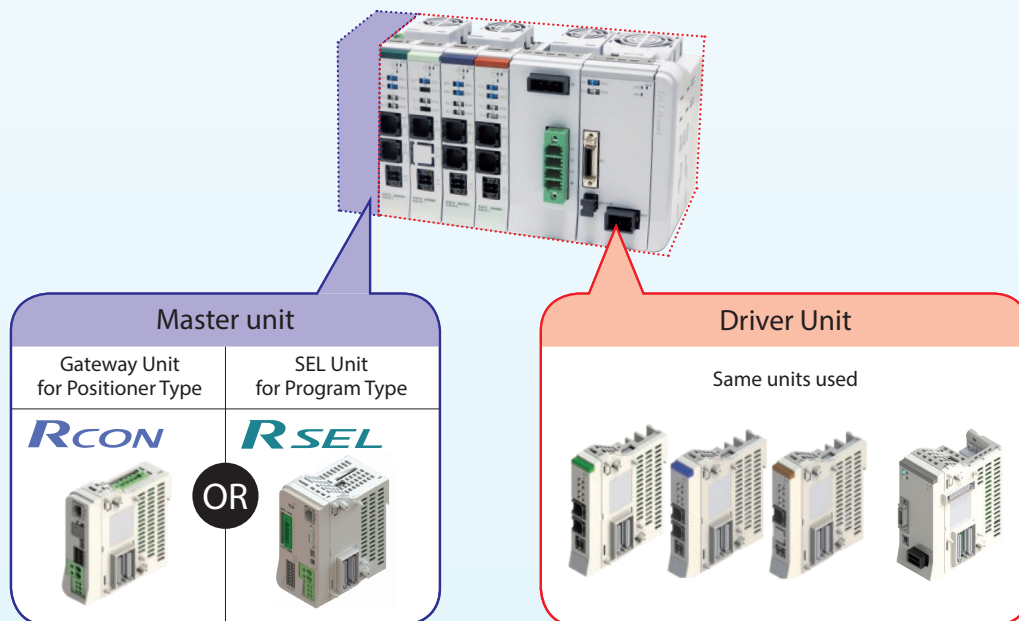

This allows for mixed control of an actuator with both a 24V motor and 200V motor.

Use the same driver units

The system can be changed just by switching out the master unit based on the control method. This allows the same driver units to be used.

R-unit

Saves space inside the control panel

RCON

RCON is recommended for actuators with two axes or more.

Up to 2 axes of actuators can be connected to one driver unit with 22mm width, making it ideal for saving space in the control panel.

Up to 16 axes^{*1} of actuators can be connected.

There will be no wasted space as only the necessary driver units will be added.

Saves up to 85%^{*2} of control panel space and reduces costs by as much as 60%.

^{*2} IAI product comparison

Up to about 85% of control panel space can be saved, compared with models that connect a 1-axis actuator to a single driver unit.

The conventional type ([Comparison example] below) requires network options installed to match the number of controllers. RCON can control driver units for up to 16 axes of actuators with a single gateway, allowing cost reductions up to 60%. It is especially recommended when using multiple axes.

Connect ELECYLINDER to a field network

This field network connection unit is specifically for use with ELECYLINDER.
It allows up to 16 axes of ELECYLINDER to be connected.
It is ideal for saving wiring and space inside the control panel.

* IAI controllers with field network option only support I/O messaging.
Ex. EtherNet/IP option cannot be connected to a PLC for explicit messaging.

* CC-link IE Basic is not supported.

High function 2 *Supports controller installation environment temperatures of 0 ~ 55°C*

Install the optional fan unit to enable use in environments of 0~55°C without lowering actuator operating duty. (One fan is required for each SEL unit and for every two 24V driver units.)

A fan unit is required for 200V power supply units and 200V driver units.

* Simple absolute units support 0~40°C.

REC supports 55°C without a fan.

High function3 Predictive maintenance/preventative maintenance function

R-units have a preventative maintenance function for the capacitor and a predictive maintenance function for the fan unit and actuator.

High function4 Ethernet-equipped

Supports Ethernet connections. (Excluding REC.)

*Supported as option for RCON.

High function5 Highest number of connection actuators in the industry! Can be connected with 947 IAI actuators*

* See P. 42 for connectable actuators.
(As of February 2020.)

Selection Method

Step 1 Select the actuators to connect. (Up to 16 axes.)

<Selection example>

Step 2 Gateway unit selection

Select the gateway unit model from the network type.

Network type	Gateway unit model
	RCON-GW/GWG-CC
	RCON-GW/GWG-CIE
	RCON-GW/GWG-DV
	RCON-GW/GWG-EC
	RCON-GW/GWG-EP
	RCON-GW/GWG-PR
	RCON-GW/GWG-PRT

<Selection example>

Selection 1

Caution Only one gateway unit can be connected per system. Split this among two or more units to connect 17 or more axes or if the power capacity is exceeded.

Example: When connecting 18 axes

Step 3 Classify actuator types into three categories.

*See P. 42 for actuators that cannot be connected.

Actuator type	Selected actuator
Models with 24V motors	<p><Selection example></p> <p>RCD RCP2 RCA2 RCP6</p>
Models with 200V motors	<p><Selection example></p> <p>RCS4 ISB DDA</p>

Step 4 24V driver unit selection (models with 24V motors)

Select the driver unit model and number of units according to the series name and motor type of the actuator.

Actuator		24V driver unit			<Selection example>	
Series	Motor type	External view	Number of axes connected to actuator	Model	Classification	Required units
RCP2 RCP3 RCP4 RCP5 RCP6	20P, 28P 35P, 42P 56P	Stepper motor 	2-axis specification	RCON-PC-2	 	1

Step 5 Simple absolute unit selection

For actuators which are to use the simple absolute specification, select a number of simple absolute units (RCON-ABU-A/P) according to the number of axes.

*Connect to the driver unit with a cable (CB-ADPC-MPA005).

The cable is supplied with the simple absolute unit.

Note: The ambient operating temperature of the simple absolute unit is within the range of 0~40°C.

<Selection example>

This is an example in which a 2-axis RCA2 Series actuator is selected for simple absolute specification.

← Selection 3

Step 6 EC connection unit selection (ELECYLINDER model)

To connect an EC Series product, select the required number of connection units based on the number of units for connecting EC.

Actuator		EC connection unit			<Selection example>	
Series	Motor type	External view	Number of axes connected to actuator	Model	Classification	Required units
EC	28P, 35P 42P, 56P		4-axis specification	RCON-EC-4		1

← Selection 4

Step 7 Classify models with 200V motors into two categories.

Models are classified as axes connected to a 200V driver unit and axes connected to an expansion unit.

Connection unit	Actuator specifications	Selected actuator
200V driver unit	Specification that meets all conditions below (Motor wattage [W]) 60W~750W (Encoder type) Incremental Battery-less Absolute	 RCS4-RA6C-WA-100  ISB-LXM-WA-200
Expansion unit	Specification other than above	 DDA-LT18CS-AM-200 <p>* This is because the absolute multi-rotation specification cannot be connected using a 200V driver unit.</p>

Step 8 200V driver unit selection

Select one 200V power supply unit and a number of driver units according to the actuators to connect.

Unit name	External view	Number of axes connected to actuator	Model	<Selection example>	
				Classification	Required units
200V power supply unit		-	RCON-PS2-3	-	1
200V driver unit		1-axis specification	RCON-SC-1	 RCS4  ISB	2

← Selection 5

← Selection 5

Step 9 Expansion unit selection

(1) Select one if there are any actuators connected with an expansion unit.

Unit name	External view	Number of axes connected to actuator	Model	<Selection example>	
				Classification	Required units
SCON expansion unit		Max. 16 axes	RCON-EXT	 DDA	1

← Selection 6

(2) Select a number of controllers (SCON-CB) to connect through the expansion unit according to the number of connected actuators.

*A number of SCON-CBs must be purchased according to the number of connected axes. (Max. number of connections: 16 axes.)

Controller	External view	Number of axes connected to actuator	I/O type	<Selection example>	
				Classification	Required units
SCON-CB/CGB		1-axis specification	SCON-**-RC-*	 DDA	1

← Selection 7

● Example of connecting an expansion unit and SCON-CB

One cable (CB-RE-CTL002) is supplied as standard with SCON-CB for RCON connection.

Additional information

If the connection cable is too short, purchase a separate cable to make the connection.

Model: CB-RE-CTL□□□

See P. 77

x Required number of units

Caution: The maximum cable length between devices is 3m.
The total cable length is 10m (max.).

Step 10 Calculation of various unit control power capacities (CP)

Make sure that the total control power capacity of the units connected to RCON is as follows.

Item	Average current
Control power (CP)	9.0A or less

How to check

Add up while checking the "Control power capacity list" below.

Control power capacity list

Item	Unit			Power capacity	<Selection example>
Control power capacity (per unit)	Master unit (including terminal unit)	Gateway unit	Without Ethernet	0.8A	
			With Ethernet	1.0A	
	24V driver unit (common for all types)	Without brake		0.2A	x 4 units
		With brake (1-axis specification)		0.4A	x 1 unit

	Expansion unit			0.1A	x 1 unit
	Simple absolute unit (common to all types)			0.2A	x 2 units
EC connection unit			0.1A	x 1 unit	

*Power capacity of master unit not included in calculation.

<Selection example>

(The total was confirmed to be 9.0A or less. If the value is larger than 9.0A, another gateway unit is required.)

Step 11 Calculation of various unit motor power capacities (MP)

Make sure that the total motor power capacity of the units connected to RCON is as follows.

Item	Average current
Motor power (MP)	37.5A or less

How to check

Add up while checking the "Motor power capacity list" below.
If the maximum current is listed, add the maximum current.
If not, add the rated current.

0.8A + 0.8A + 3.9A + 5.7A + 4.4A + 4.4A + 1.5A + 3.9A = 25.4A < 37.5A

(The total was confirmed to be 37.5A or less. If the value is larger than 37.5A, another gateway unit is required.)

OK

It is possible to calculate the control power and motor power capacity as in steps 10/11 (calculation when all axes are simultaneously used at maximum load).

Step 12 200V motor power limiting

Make sure that the total motor wattage (W) of the actuators connected to RCON-SC is as follows.

*Some limitations apply. See "Actuators that cannot connect to R-units" (P. 42) for details.

Connected power	Total max. output of connected axes
Three-phase 200VAC	2,400W
Single-phase 200VAC	1,600W

How to check

Confirm the motor wattage (W) in the actuator specifications.

<Selection example>

Step 13 Fan unit selection

If the controller installation environment may exceed 40°C, a fan unit will be required. (Up to 55°C.)*

(1) 24V driver unit fan unit

The number of fan units is the total number of driver units divided by 2.

If the total number of 24V driver units is an odd number, add 1 to the total number and divide it by 2.

When ordering, be sure to specify the gateway unit model.

<Selection example>

24V driver units (5 units + 1) ÷ 2 = 3 units

Fan unit [RCON-FU] x 3 units

Selection 8

Note: The ambient operating temperature of the simple absolute unit is within the range of 0~40°C even when a fan unit is installed.

*The operating temperature of the gateway unit/driver unit is within the range of 0~55°C.

However, temperature derating may occur depending on whether a fan unit is installed.

Operation without derating is possible without a fan unit at 0 ~ 40°C;

however, at 40 ~ 55°C, actuator operating duty must be reduced by 20% every 5°C.

(2) 200V driver unit and power supply unit fan units

A single fan unit is always included with each installation unit. (There is no need to specify the model.)

<Selection example>

200V driver units x 2 units

RCON-FUH x 2 units
(supplied)

200V power supply unit RCON-FU x 1 unit
(supplied)

Step 14 Terminal units

Select the terminal unit to connect based on the unit connected to the left of the terminal unit.
(Units are designed to prevent incorrect connections. Confirm the model first before installing a unit.)

Unit connected to left	Terminal unit single product model number	Supplied unit and cautions when ordering
RCON-SC	RCON-GW-TRS	Supplied with 200V power supply unit (select "TRN (no terminal unit)" for the gateway unit option)
Other than RCON-SC	RCON-GW-TR	Supplied with gateway unit

← Selection 9

Step 15 Unit models to be ordered

Order using the model name for each unit.

<Selection example>

Order model (x number of units)	Name/specification
RCON-GW-CC-FU3-TRN	Gateway unit (with 3 fans, without terminal unit)
RCON-EXT	SCON expansion unit
RCON-PC-2	24V driver unit (RCP Series connection, 2-axis specification)
RCON-PC-1	24V driver unit (RCP Series connection, 1-axis specification)
RCON-PCF-1	24V driver unit (RCP Series connection, 1-axis specification, for high thrust)
RCON-AC-2	24V driver unit (RCA Series connection, 2-axis specification)
RCON-DC-1	24V driver unit (RCD Series connection, 1-axis specification)
RCON-ABU-A x 2 units	Simple absolute unit (for RCA Series connection)

Caution

Only one SEL unit can be connected per system. Split this among two or more units to connect 9 or more axes or if the power capacity is exceeded.

Example: When connecting 14 axes

Selection 1

Step 3 Classify actuator types into two categories.

*See P. 42 for actuators that cannot be connected (TTA/SCARA/Servo press/EC/etc).

Actuator type		Selected actuator

RCD	3D		2-axis specification	RCON-DC-2	-	-
			1-axis specification	RCON-DC-1	-	-

Step 5 Simple absolute unit selection

For actuators which are to use the simple absolute specification, select a number of simple absolute units (RCON-ABU-A/P) according to the number of axes.

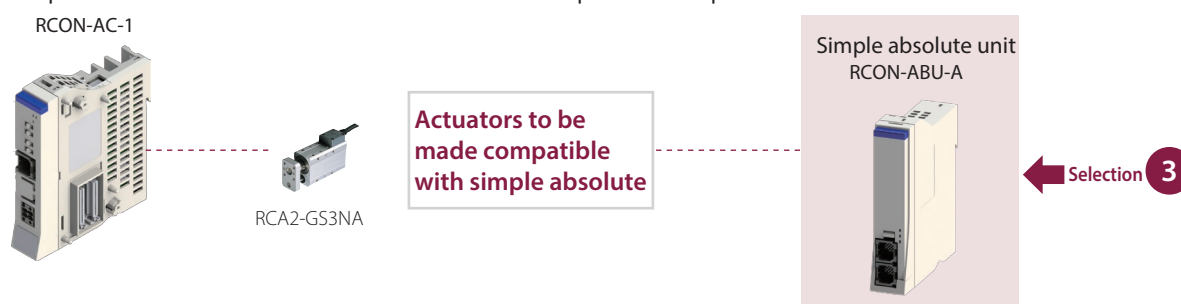

* Connect to the driver unit with a cable (CB-ADPC-MPA005).

The cable is supplied with the simple absolute unit.

Note: The ambient operating temperature of the simple absolute unit is within the range of 0~40°C.

<Selection example>

This is an example in which an RCA2 Series actuator is selected for simple absolute specification.

Step 6 Classify models with 200V motors into two categories.

Models are classified as axes connected to a 200V driver unit and axes connected to an expansion unit.

Connection unit	Actuator specifications	Selected actuator
200V driver unit	Specification that meets all conditions below (Motor wattage [W]) 60W~750W (Encoder type) Incremental Battery-less Absolute	 RCS4-WRA16R-WA-400  IS(P)B-LXL-WA-400
Expansion unit	Specification other than above	 RCS2-RTC8L-I-20 * This is because the 20W specification cannot be connected to RCON-SC.

Step 7 200V driver unit selection

Select one 200V power supply unit and a number of driver units according to the actuators to connect.

Unit name	External view	Number of axes connected to actuator	Model	<Selection example>	
				Classification	Required units

Step 8 Expansion unit selection

(1) Select only one of two models listed below if there are any 100/200VAC servo actuators connected with an expansion unit. (Those two different type can not be used in one system.)

Unit name	External view	Number of axes connected to actuator	Model	<Selection example>	
				Classification	Required units
SCON expansion unit		Max. 8 axes	RCON-EXT	-	-
Expansion unit		Max. 8 axes	RCON-EXT-NP/PN		1

← Selection 5

(2) Select a number of controllers (SCON) to connect through the expansion unit according to the number of connected actuators. *A number of SCONs must be purchased according to the number of connected axes. (Max. number of connections: 8 axes.)

Controller	External view	Number of axes connected to actuator	I/O type	<Selection example>

← Selection 6

● Example of connecting an SCON connection expansion unit and SCON-CB

One cable (CB-RE-CTL002) is supplied as standard with SCON-CB for RSEL connection.

Additional information

If the connection cable is too short, purchase a separate cable to make the connection.

Model: CB-RE-CTL□□□
See P. 77

x Required number of units

Caution: The maximum cable length between devices is 3m. The total cable length is 10m (max.).

(3) When selecting a PIO unit

A PIO unit can be connected to increase the number of PIO IO points. (The maximum number of input points is 144 and maximum number of output points is 144.)

There are 16 input points and 16 output points for a single unit, with a maximum of 8 units connected. (If connecting a PIO/SIO/SCON expansion unit, the maximum will be 7 units.)

If the number of input points or output points is evenly divisible by 16, order that number of PIO units.

If the number is not evenly divisible, order a number of PIO expansion units equal to the number rounded up to the next whole number.

<Selection example>

In this example, the number of NPN specification IO points is increased by 24 input points and 20 output points.

$$24 \text{ input points} \div 16 = 1.5$$

Step 9 Calculation of various unit control power capacities (CP)

Make sure that the total control power capacity of the units connected to RSEL is as follows.

Item	Average current
Control power (CP)	9.0A or less

How to check

Add up while checking the "Control power capacity list" below.

Control power capacity list

Item	Unit	Power capacity	<Selection example>
Control power capacity (per unit)	Master unit (including terminal unit)	SEL unit	1.2A
	24V driver unit (common for all types)	Without brake	0.2A

		With brake (2-axis specification)	0.6A
	200V driver unit (including 200V power supply unit)	Without brake	0.2A
		With brake	0.5A
	Expansion unit (common for all types)	0.1A	x 3 units
	Simple absolute unit (common to all types)	0.2A	x 3 units x 1 unit

*Power capacity of master unit not included in calculation.

<Selection example>

(The total was confirmed to be 9.0A or less. If the value is larger than 9.0A, another SEL unit is required.)

Step 10 Calculation of various unit motor power capacities (MP)

Make sure that the total motor power capacity of the units connected to RSEL is as follows.

Item	Average current
Motor power (MP)	37.5A or less

How to check

Add up while checking the "Motor power capacity list" below.
If the maximum current is listed, add the maximum current.
If not, add the rated current.

Total

(The total was confirmed to be 37.5A or less. If the value is larger than 37.5A, another SEL unit is required.)

It is possible to calculate the control power and motor power capacity as in steps 9/10 (calculation when all axes are simultaneously used at maximum load).

Step 11 200V motor power limiting

Make sure that the total motor wattage (W) of the actuators connected to RCON-SC is as follows.

*Some limitations apply. See "Actuators that cannot connect to R-units" (P. 42) for details.

Connected power	Total max. output of connected axes
Three-phase 200VAC	2,400W
Single-phase 200VAC	1,600W

How to check

Confirm the motor wattage (W) in the actuator specifications.

<Selection example>

Step 12 Fan unit selection

If the controller installation environment may exceed 40°C, a fan unit will be required. (Up to 55°C.)*

(1) SEL unit and 24V driver unit fan units

A single fan unit can be installed to a SEL unit.

The number of fan units for 24V driver units is the total number of 24V driver units divided by 2.

If the total number of 24V driver units is an odd number, add 1 to the total number and divide it by 2.

When ordering, be sure to specify the number of units for the SEL unit model.

<Selection example>

Fan unit [RCON-FU] x 3 units

Selection **8**

Note: The ambient operating temperature of the simple absolute unit is within the range of 0~40°C even when a fan unit is installed.

*The operating temperature of the gateway unit/driver unit is within the range of 0~55°C. However, temperature derating may occur depending on whether a fan unit is installed. Operation without derating is possible without a fan unit at 0 to 40°C; however, at 40 to 55°C, actuator operating duty must be reduced by 20% every 5°C.

(2) 200V driver unit and 200V power supply unit fan units

A single fan unit is always included with each installation unit. (There is no need to specify the model.)

<Selection example>

Step 13 Terminal units

Select the terminal unit to connect based on the unit connected to the left of the terminal unit.
(Units are designed to prevent incorrect connections. Confirm the model first before installing a unit.)

Unit connected to left	Terminal unit single product model number	Supplied unit and cautions when ordering
RCON-SC	RCON-GW-TRS	Supplied with 200V power supply unit (select "TRN (no terminal unit)" for the SEL unit option).
Other than RCON-SC	RCON-GW-TR	Supplied with SEL unit.

Step 14 Unit models to be ordered

Order using the model name for each unit.

<Selection example>

MEMO

Selection Method

Step 1 Select the ELECYLINDER with ACR option to connect. (Up to 16 axes.)

<Selection example>

* only EC with ACR option can be connected to RCON-EC unit.

Step 2 EC gateway unit selection

Select the EC gateway unit model from the network type.

Network type	Gateway unit model
	REC-GW-CC
	REC-GW-CIE
	REC-GW-DV
	REC-GW-EC
	REC-GW-EP
	REC-GW-PR
	REC-GW-PRT

<Selection example>

← Selection 1

Caution

Only one EC gateway unit can be connected per system.
Split this among two or more units to connect 17 or more axes or if the power capacity is exceeded.

Example: When connecting 20 axes

Step 3 EC connection unit selection

Up to 4 axes of ELECYLINDER can be connected to one EC connection unit.

Select the required number of EC connection units based on the number of units for connecting ELECYLINDER.

Actuator		EC connection unit			<Selection example>	
Series	Motor type	External view	Number of axes connected to actuator	Model		
EC	28P, 35P 42P, 56P		4-axis specification	RCON-EC-4		2 ← Selection 2

Step 4 Calculation of EC connection unit motor power capacities (MP)

Make sure that the total motor power capacity of the units connected to REC is as follows.

Item	Average current
Motor power (MP)	37.5A or less

How to check

Add up while checking the "Motor power capacity list" below.
If the maximum current is listed, add the maximum current.
If not, add the rated current.

Motor power capacity list

Item	Actuator/EC connection unit				Rated current	Max. current		<Selection example>
		Series	Motor type	Type		When energy-saving is set		
Motor power capacity (per 1-axis actuator)	Stepper motor/ RCON-EC	EC (ACR)	35P/42P/56P	Other than the below	2.3A	2.2A	3.9A	x 4 axes

<Selection example>

(The total was confirmed to be 37.5A or less. If the value is larger than 37.5A, another EC gateway unit is required.)

It is possible to calculate the motor power capacity as in step 4 (calculation when all axes are simultaneously used at maximum load).

Step 5 Unit models to be ordered

Order using the model name for each unit.

Power capacity

For R-units, make sure for each unit that the calculated results for control power and motor power do not exceed the current limit value for selection calculation, based on the connection configuration. When selecting a 200V driver unit, ensure that the total motor wattage (W) does not exceed the total wattage (W) for the maximum number of connectable axes. Only one RCON-PS2-3 can be used per RCON/RSEL system.

*The maximum number of connectable axes varies by series.

Caution

For operation patterns where acceleration/deceleration operation is performed simultaneously on all axes, and where operating duty is 100%
Motor power must be calculated at the maximum current value. (If the maximum current is not listed, calculate with the rated current.)

The RCON-GW field network control operation mode can be selected from the following control modes. Data required for operation (target position, speed, acceleration, push current value, etc.) are written by a connected PLC or other host controller into the specified addresses.

Operation mode	Description	Overview
Direct numerical control mode	This mode allows designating the target position, speed, acceleration/deceleration, and current limit value for pushing numerically. Also, it is capable of monitoring the present position, present speed, and the command current value with 0.01mm increments.	<p>PLC</p> <p>Target position Positioning width Speed, acceleration/deceleration Pushing percentage Control signal</p> <p>Current position Motor current (command value) Present speed (command value) Alarm code Status signal</p> <p>Communication via a field network</p> <p>Actuator</p>
Simple direct value mode	Can modify any of the stored target positions by numerical value. Also allows monitoring of the present position numerically with 0.01mm increments.	<p>PLC</p> <p>Target position Target position No. Control signal</p> <p>Present position Completed position No. Status signal</p> <p>Communication via a field network</p> <p>Actuator</p>
Positioner 1 mode	Can store up to 128 points of position data, and can move to the stored position. Also allows monitoring of the present position numerically with 0.01mm increments.	<p>PLC</p> <p>Target position No. Control signal</p> <p>Completed position No. Status signal</p> <p>Communication via a field network</p> <p>Actuator</p>
Positioner 2 mode	Can store up to 128 points of position data, and can move to the stored position. This mode does not allow monitoring of the present position. This mode has less in/out data transfer volume than the Positioner 1 mode.	<p>PLC</p> <p>Target position No. Control signal</p> <p>Completed position No. Status signal</p> <p>Communication via a field network</p> <p>Actuator</p>
Positioner 3 mode	Can store up to 128 points of position data, and can move to the stored position. This mode does not allow monitoring of the present position. This mode has less in/out data transfer volume than the Positioner 2 mode, and controls travel with the minimum of signals.	<p>PLC</p> <p>Target position No. Control signal</p> <p>Completed position No. Status signal</p> <p>Communication via a field network</p> <p>Actuator</p>
Positioner 5 mode	Can store up to 16 points of position data, and can move to the stored position. This mode has less in/out data transfer volume and fewer positioning tables than the Positioner 2 mode, and allows monitoring of the present position numerically with 0.1mm increments.	<p>PLC</p> <p>Target position No. Control signal</p> <p>Present position Completed position No. Status signal</p> <p>Communication via a field network</p> <p>Actuator</p>

Power consumption	3.6W or less (150mA or less)
Ambient operating temperature	0~40°C
Ambient operating humidity	20~85% RH (non-condensing)
Environmental resistance	IP20
Mass	470g (TB-02 unit only)

PC Teaching Software (Windows only)

- **Features** Start-up support software which comes equipped with functions such as position/program teaching, trial operation, and monitoring.

For RCON/REC

■ **RC/EC PC Software**

Please contact IAI for the current supported versions.

■ **Configuration**

Supported Windows versions: 7/10

or PC Software downloaded link

Supported Windows versions: 7/8/8.1/10

■ **Model RCM-101-USB**

Please contact IAI for the current supported versions.

(with an external device communication cable + USB conversion adapter + USB cable)

■ **Configuration**

For RSEL

■ Model **XSEL PC Software**

■ Features PC teaching software (DVD) only.

If you want to connect both the controller and PC side with a USB cable or Ethernet cable, only the software needs to be purchased. A cable that meet the following specifications is to be prepared by the customer.

■ Configuration Please contact IAI for the current supported versions.

Notes

When operating the actuator by USB connection, be sure to connect the stop switch to the system I/O connector.

If an emergency switch is not available, use the emergency stop-equipped model "IA-101-X-USBMW".

	Controller side connector	Maximum cable length
USB cable specification	USB Mini-B	5m
Ethernet cable specification*	10/100/1000BASE-T (RJ-45)	5m

* In order to use EtherNet cable, parameters need to be set by other cables of IA-101-X-MW-JS or USB mini-B.

Supported Windows versions:
7/8/8.1/10

or PC Software downloaded link

■ Model **IA-101-X-MW-JS** (With RS232C cable + connector conversion cable)

■ Configuration Please contact IAI for the current supported versions.

Supported Windows versions:
7/8/8.1/10

CB-ST-E1MW050-EB cannot be used "when building an enable system using an external power supply using the system I/O connector" or "when building a duplex safety circuit". (The use of CB-ST-A2MW050-EB is required.)

24 VDC power supply

- **Overview** The recommended power supply for connection to R-units.
The power supply is the same height as RCON and can be easily installed on control panels.
It can also be connected to R-units to monitor power status.

■ Model **PSA-24 (without fan)**

■ Model **PSA-24L (with fan)**

■ Specifications Table

Item	Specification	
	100VAC input	200VAC input
Power input voltage range	100VAC~230VAC $\pm 10\%$	
Input power supply current	3.9A or less	1.9A or less
Power capacity	Without fan: 250VA With fan: 390VA	Without fan: 280VA With fan: 380VA
Inrush current ^{*1}	Without fan: 17A (typ) With fan: 27.4A (typ)	Without fan: 34A (typ) With fan: 54.8A (typ)
Generated heat	28.6W	20.4W
Output voltage range ^{*2}	24V $\pm 10\%$	
Continuous rated output	Without fan: 8.5A (204W), with fan: 13.8A (330W)	
Peak output	17A(408W)	
Efficiency	86% or more	90% or more
Parallel connection ^{*3}	Max.: 5 units	

*1 The pulse width of flowing inrush current is less than 5ms.

*2 In order to enable parallel operation, this power supply can vary the output voltage according to the load. Therefore, the power supply unit is dedicated for IAI controllers.

*3 Parallel connection cannot be used under the following conditions.

- Parallel connection of PSA-24 (specification without fan) and PSA-24L (specification with fan)
- Parallel connection with a power supply unit other than this power supply
- Parallel connection with PS-24

Maintenance Parts

Fan unit

- **Overview** An option for forced cooling of the driver unit.

■ Model **RCON-FU**

For 200V driver

■ Model **RCON-FUH**

Connector conversion cable

- **Features** Converts a touch panel teaching pendant or RS232C cable D-sub 25-pin connector to an RSEL teaching connector. (TB-02/TB-03-SJ, IA-101-X-MW-JS accessory.)

■ Model **CB-SEL-SJS002**

For RCON-GWG

■ Model **DP-5**

For RSEL

■ Model **DP-4S**

For 200V driver

■ Model **DP-6**

System I/O connector

- Overview A connector for emergency stop input, operation mode switching input from exterior, etc.

For RCON-GW(G)

■ Model **DFMC1,5/5-ST-3,5**

For RSEL

■ Model **DFMC1,5/8-ST-3,5 (RSEL)**

Drive source shutoff connector

- Overview A drive source shutoff input connector.

For 24V driver

■ Model **DFMC1,5/2-STF-3,5**

For EC connection unit

■ Model **DFMC1,5/4-ST-3,5 (REC)**

200V power supply connector

For 200V power supply

■ Model **SPC5/4-STF-7,62**

Terminal connector

- Overview Required as a terminal resistor when connecting SCON.

■ Model **RCON-EXT-TR**

Expansion SIO port connector

For PIO/SIO/SCON connection

■ Model **FMC1,5/3-STF-3,5**

Replacement battery

- Overview A replacement battery for the simple absolute unit.

■ Model **AB-7**

Regenerative resistance unit

- Overview Unit that converts the regenerative current generated during motor deceleration to heat. A regenerative resistor is built-in to the 200V driver unit and 200V power supply unit. However, external regenerative resistance will be required if the timing at which energy is generated due to deceleration is the same.

■ Model **RESU-2**(Standard specification)/**RESUD-2**(DIN rail mounting specification)

Specifications

Model	RESU-2	RESUD-2
Unit weight	About 0.4kg	
Built-in regenerative resistance value	235Ω 80W	
Unit mounting method	Screw mount	DIN rail mount
Attached cable	CB-SC-REU010	

*When two regenerative units are required, please use one RESU-2 and one RESU-1 (please contact IAI for the details).
